

NoAE Workshop

June 12, 2013 – Aachen/Germany

**GEFRA is a civil initiative to
promote a revolutionary
concept in passenger car traffic**

GEFRA aims to form a new infrastructure for emission free driving passenger cars driving in platoons, thus helping to reduce CO2 emissions and reducing traffic jams in congested areas.

GEFRA is to form a consortium that will further develop the system, pre-finance individual projects, seek government endorsement and regulation and earn revenues from payment per kilometer from the users

We need a group of leading companies in the realm of project development and realisation, roadbuilding, computer systems, engineering, evt. car manufacturers.
